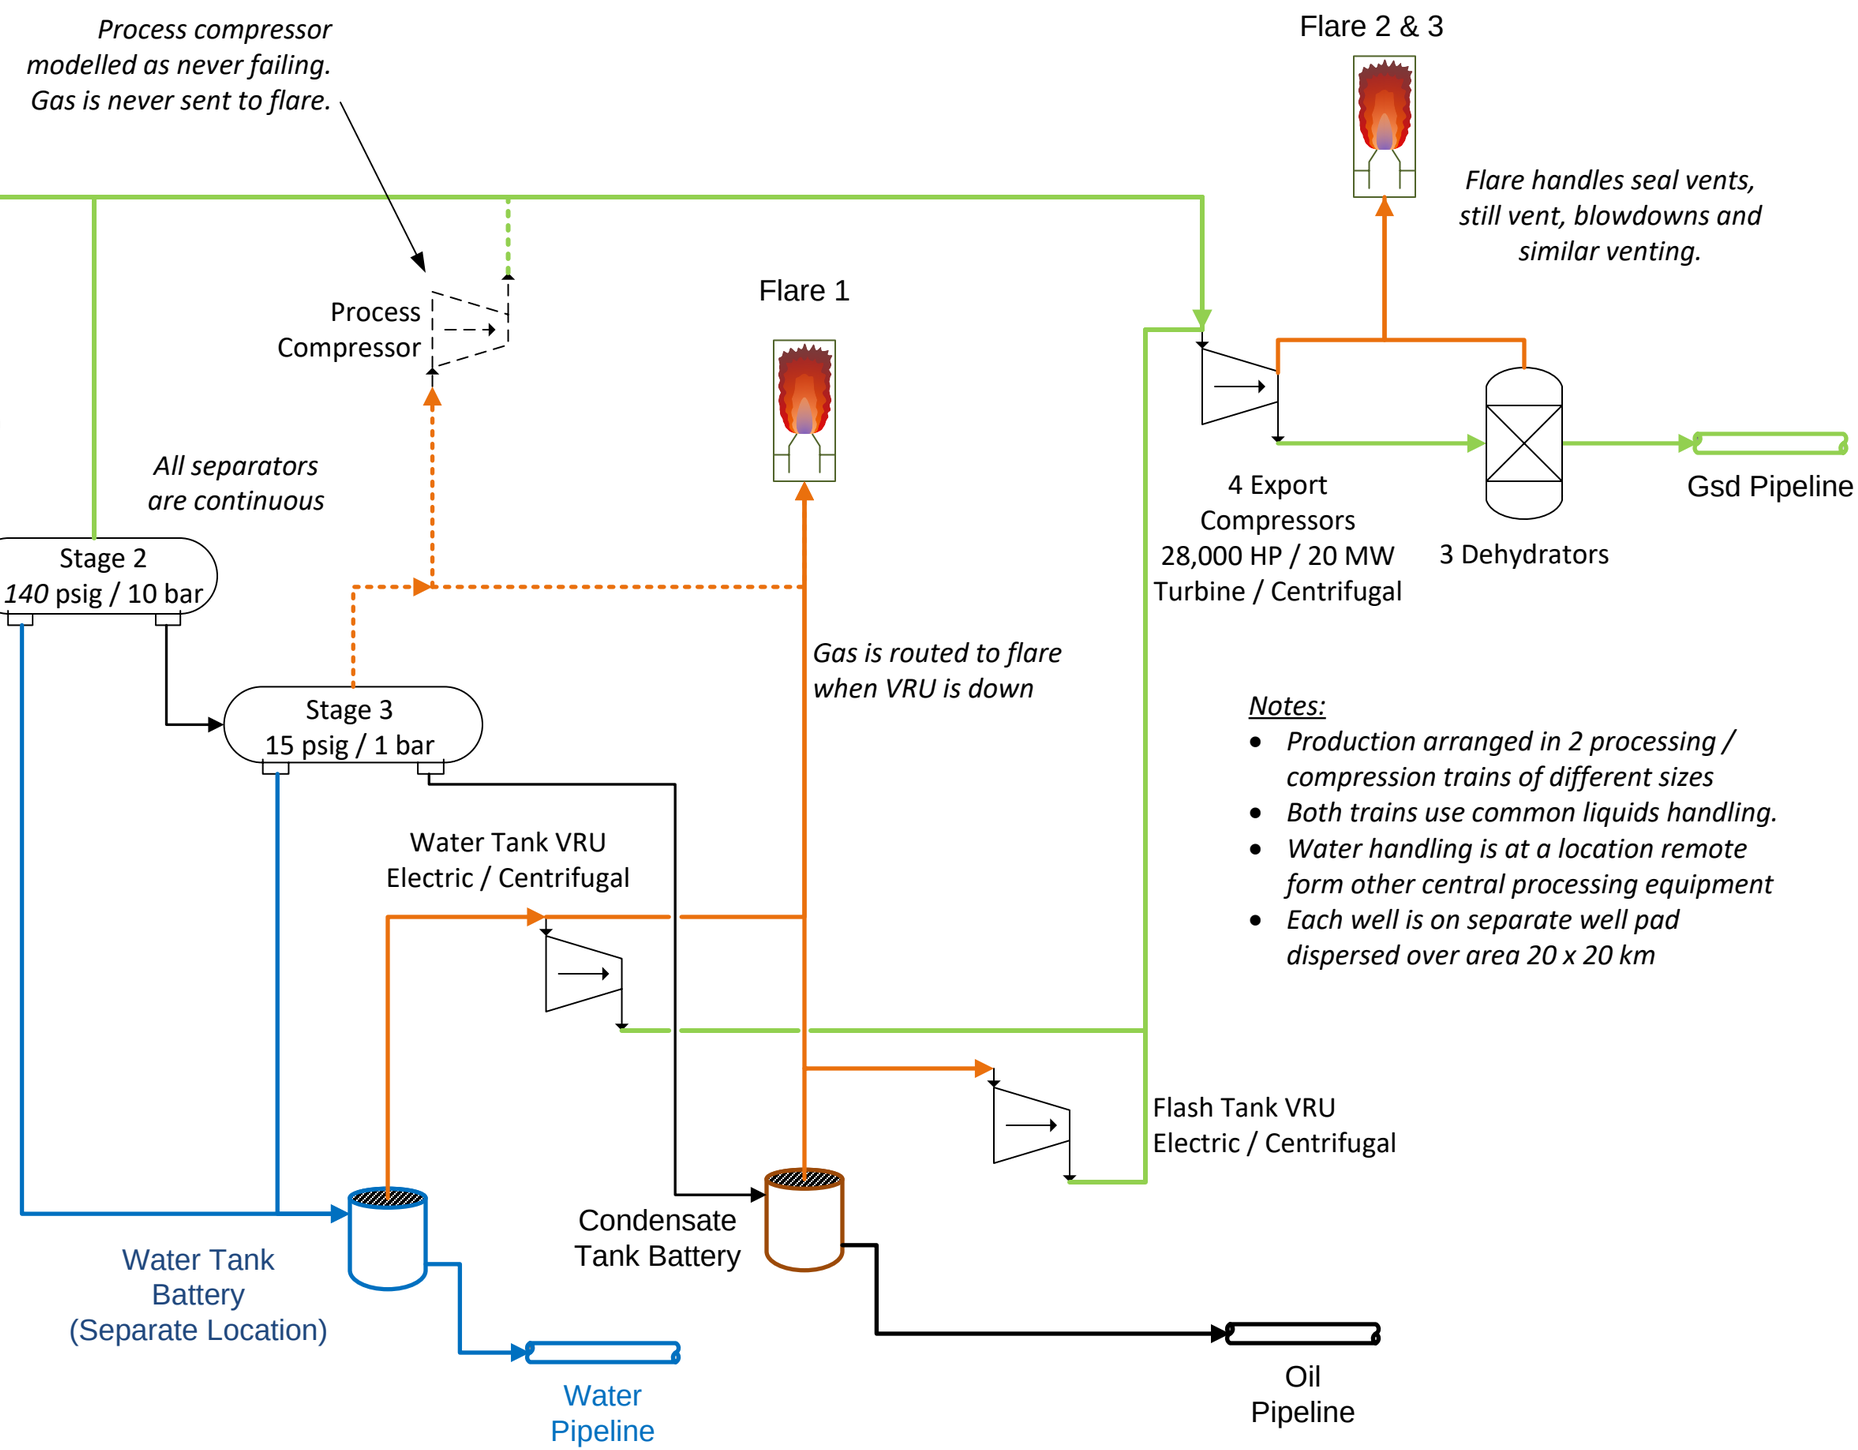
Site 3:
Conventional Wet Gas



90 Wells

Prod.	Per Well	Per Site
Oil	500 bbl/d	45,000 bbl/d
Water	100 bbl/d	9,000 bbl/d
Gas	10 MMscfd	900 MMscfd
	283,000 m^3/d	25 Mm^3/d

API Gravity: 55
GOR: 477 scf/bbl
Methane fraction: 0.85

Wells are dispersed from central processing facility on individual pads

Legend

Oil — Water — Gas — Waste Gas

Dotted lines indicate gas flows that exist, but do not need to be simulated.

Items in italics were not known for the prototypical facility and were estimated by the study team

Notes:

- *Production arranged in 2 processing / compression trains of different sizes*
- *Both trains use common liquids handling.*
- *Water handling is at a location remote form other central processing equipment*
- *Each well is on separate well pad dispersed over area 20 x 20 km*
